

Asking for irradiation facility availability for next EURADOS IC2022n inter-comparison exercise

Dear colleagues,

the European dosimetry radiation group (EURADOS, <http://www.eurados.org>) intends to organize a **European inter-comparison exercise in the field of personal neutron dosimetry** to be announced end of 2021.

The action will be coordinated by EURADOS Working Group 2 "Harmonisation of Individual Monitoring". As for IC2012n and IC2017n exercises, about 30 individual monitoring services (participants) are expected to send their routine whole body dosimeters to this intercomparison. To perform such an inter-comparison, EURADOS will have a contract with a Calibration Laboratory to perform the irradiation tests during summer 2022.

If you are interested to act as Laboratory for irradiation tests, please, write an email to marie-anne.chevallier@irsn.fr. A questionnaire will then be sent to you, to be filled before **28th, February 2021**. Such informative document is not yet a commitment but it would help the organization group to plan this inter-comparison exercise in major detail.
